What is an apprenticeship?

An apprenticeship is a real job where you get paid while receiving hands-on training in the workplace.

Apprentices are supported by their employer and Lakes College as training provider to learn the knowledge, skills and behaviours needed for their role.

At the end of an apprenticeship, an End-Point Assessment is completed to confirm the apprentice has successfully achieved the required standard.

Apprenticeships last at least one year and range from levels equivalent to GCSEs to degree level.

At least 20 per cent of an apprentice's normal working hours must be off-the-job training which develops skills or qualifications.

What is Lakes College's role?

Lakes College is the training provider, working with employers to recruit the right apprentice and supporting their development.

Our technically-qualified teachers and coaches deliver learning in college and in the workplace.

Lakes College supports apprentices throughout their apprenticeship to successful completion of the End-Point Assessment.

What is the employer's role?

As an apprentice you have the same employment rights and terms and conditions as any other employee.

The employer pays the apprentice's wages and provides on-the-job experience which meets the requirements of the apprenticeship.

This includes mentoring and support in the workplace, training opportunities and employment for the duration of the apprenticeship.

Our academy will help fill vacancies in civil engineering, electrical, quality, health and safety, business admin, engineering, nuclear, adult care and more with employers including...
