Advice for Parents

There are a fantastic range of well written books out there including Jordan Ellenberg's "How Not to be Wrong - the Hidden Mathematics of Everyday Life", Simon Singh's "The Code Book" and "Fermat's Last Theorem", "Things to Make and do in the Fourth Dimension" or anything else by Matt Parker, and plenty else. Many of these authors also put lots of great material online.

We use www.corbettmaths.com and www.mathspad.com for much of our day to day work, as well as putting resources onto our own google classrooms. These sites give students a better chance than ever before to take control of their own learning.
